

IN THE ABSTRACT**ABSTRACT****Connector Arrangement**

The present invention relates to a connector arrangement with a first housing (1) and a second housing (2), which receive a plug arrangement (3) and a socket arrangement (4), respectively, and can be joined together by means of a cross slider (6) which has guide frame ramps (7a, 7b), and which is controlled by a pivoted lever (5) mounted on a housing, wherein all guide frame slots or ramps (7a, 7b, 8) and the bearing of the pivoted lever are open in the direction of plugging in order to make possible an insertion of the respective guide tabs or bearing tabs.
